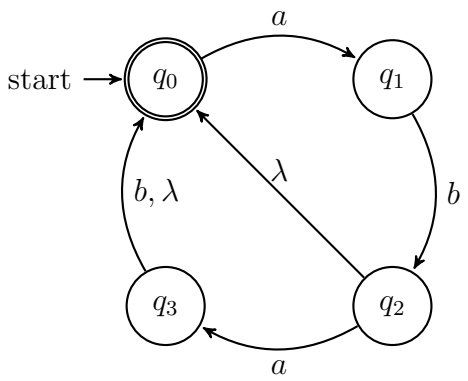
CS321 - Homework 2

October 16, 2013

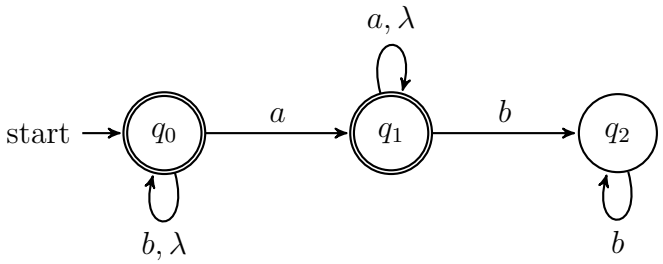
Section 2.2

6 For the nfa in Figure 2.9, find $\delta^*(q_0, 1010)$ and $\delta^*(q_1, 00)$.

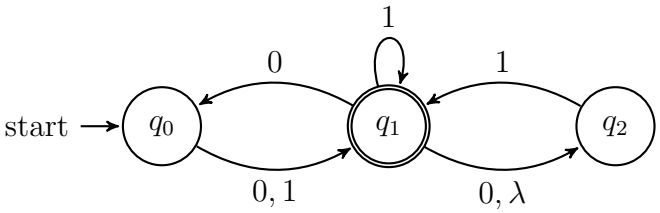
7 Design an NFA with no more than five states for the set
$\{abab^n : n \geq 0\} \cup \{aba^n : n \geq 0\}$.



10(a) Find an NFA with three states that accepts the language
$L = \{a^n : n \geq 1\} \cup \{b^m a^k : m \geq 0, k \geq 0\}$.



12 Which of the strings 00, 01001, 10010, 000, 0000 are accepted by the following nfa?



The strings accepted are: 01001, and 000.

14 Let L be the language accepted by the nfa in Figure 2.8. Find an nfa that accepts $L \cup \{a^5\}$.

18 Consider the following modification of Definition 2.6. An nfa with multiple initial states is defined by the quintuple

$$M = (Q, \Sigma, \delta, Q_0, F),$$

where $Q_0 \subseteq Q$ is a set of possible initial states. The language accepted by such an automaton is defined as

$$L(M) = \{w : \delta^*(q_O, w) \text{ contains, } q_f, \text{ for any } q_0 \in Q_0, q_f \in F\}.$$

Show that for every ufa with multiple initial states there exists an nfa with a single initial state that accepts the same language.

Section 2.3

6 Is it true that for every nfa $M = (Q, \Sigma, \delta, q_o, F)$ the complement of $L(M)$ is equal to the set $\{w \in \Sigma^*, \delta^*(q_0, w) \cap (Q - F) \neq 0\}$? If so, prove it; if not, give a counterexample.
